

HELP IN SETTING UP THE INTELLIGENT EYE IR REPEATER

To make it easier to find the location point of the Infra Red sensor, we have provided images of a selection of SKY and other box sets and indicated where the IR sensor point is.

SKY Q box

Use Flashlight
To Find Non
Obvious
Sensors

A good method to identify the IR sensor point which may not always be obvious on AV equipment such as AMPS, it to use a book or similar. Place this in front of the equipment with the remote control facing it, so that the book blocks out the IR signal and the remote stops working. The next step is to simply move the book slowly without moving the remote. At the point that the remote starts to function, this is the point where the IR sensor is located on the equipment.
